

Cabinet of the United States of America

“The road to a strong American Nation through the economy, politics and the energy market.”

Historical Context of the Cabinet of the United States of America

Ever since the United States was founded, there has been a need to have a space for the President to candidly and privately speak with his most trusted advisors, his cabinet, the secretaries of the most important pillars of growth and development of the nation.

Established in Article II, Section 2, of the Constitution, this cabinet is responsible for advising the president in major decisions regarding the nation, dating back to George Washington’s action of seeking advice from leaders such as Alexander Hamilton, Thomas Jefferson, Henry Knox. The first meeting was held on November 26, 1791 and continues to be the most important entity politically for the safeguarding and development of the American nation.

Context of the Central Theme

The United States of America is characterized by its intricate workings in every aspect, and the most telling example of American efficiency are the decisions made by the delicately chosen cabinet in any and every administration. When we speak of ensuring President Biden’s reelection we must take many factors into account, most importantly the current political climate in the nation, which entails low approval ratings and a strong wave of republican acceptance in the midterms mostly in the southern states of our nation. Yet there is still hope going into a new electoral period, such as maintaining a unified democratic party, incentivizing vice president

Kamala Harris and himself to stay as close to their agenda as possible and most importantly (or most influentially) maintaining the economic growth that Mr. Biden has implemented in the United States, hoping to make the dollar stronger and consequently, the economy, this will be a key factor in President Biden's reelection campaign.

On the topic of maintaining a strong dollar, the dollar's value doesn't only affect the United States, but it also affects any and every international transaction that is dollar dependent, its valuation in foreign exchange also influences the attraction of foreign investments to the United States, a key factor for a strong economy. But there are always risks and issues regarding a strong American dollar, such as exacerbating inflation hindering trade rates, reducing competitiveness for exports of US goods. In the realm of politics and the economy, we must find ways for the dollar to be stable and strong enough to keep the United States at its strong economic status without hindering the USA's participation in the international trade market.

We must also consider that the United States must grow towards a more sustainable form of governance and sustain decisions that are coherent with economic growth going hand in hand with sustainability, in this case expanding the business of the energy market. A particularly popular topic in the energy market is the implementation of clean energy, rooted in the world's growing opposition to fossil fuels and its rising prices. Implementing clean and sustainable energy sources such as solar and wind powers opens the panorama for the growth of this specific market, the development of new technology and the strengthening of the energy market. Seeing as clean energy sources are fairly competitive monetarily with fossil fuels and the US government has declared their utmost support in growing these horizons, the economy and political realms see themselves affected by the newfound interest of expanding this market, but it must be developed carefully for it to be sustainable.

Research Questions

TOPIC A : America's economic situation: Maintaining a strong Dollar

1. How is your department being affected by the dollar fluctuating constantly?
2. How has your department influenced the stability of the American economy in the last 5 years?

3. What do you consider to be the key factors to balance the risks and opportunities of having a strong dollar?

TOPIC B : On the way to the 2024 elections: Ensuring the reelection

1. What are the key challenges in ensuring Biden's reelection in regards to your department?
2. What role does the current cabinet and your department play in the political polarization of today?
3. What specific goals has your department set in terms of reelection and how efficient have these goals been?
4. How has your department excelled in the current administration, what are your accomplishments up to now?
5. What are your department's long-term goals? What could you achieve with the reelection?
6. Where has your department shown shortcomings? And how do you intend to prevent these issues in a possible future presidential period?

TOPIC C : Energy market: Headwinds for the U.S. in the face of expanding the business

1. What actions are being taken to expand the energy market as of right now?
2. What policies are in force that incentivize the USA to consider implementing clean energy sources?
3. What international treaties and agreements does the USA take part in that would support the idea of expanding the energy market?

4. How could this expansion affect the economy? How would it affect specific communities that are not currently economically stable enough to make this change?
5. Is the decision to expand the market aligning with long-term sustainability goals?
6. Has there been any actions taken by your department in the expansion of the energy market thus far?

Character Research Questions

1. What are your character's faculties? What can and can't they do in their position?
2. Is your character actively voting in the cabinet?
3. What has your character said and done regarding the topics at hand? Have they issued statements or implemented specific plans of action ?

Discussion questions

1. How have previous administrations handled these topics or topics that are similar in nature?
2. What are alternative solutions to the policies and discussions currently being held?
3. How have these topics directly affected your department?
4. How does foreign policy affect the issues at hand?
